We **crunch** the house-price data across every county- with surprising results

我们分析了美国每个县的房价数据，得出了惊人的结果

Between 2011 and 2020 the monthly **mortgage** payment on a typical home was 12% lower than the **rental** for a similar **property** (**assuming a deposit** of 13%, the current national average). A **steady** rise in home values, worth roughly 7% a year over the past decade, also ensured that buyers built **equity** in their homes.

But, as our maps below show, today the choice between buying and **renting** looks different.

多年来，美国购入新房的买家享受着比租客更低的住房成本。2011年至2020年间，普通住房的月供比同类房产的租金低12%

（假设首付的比例为13%，即目前的全国平均水平）。过去十年间，房屋价值稳步上涨，每年约上涨7%。这也确保了购房者能够积累房屋资产。但是，正如我们下面的图表所示，如

【2】Blame high house prices and **soaring mortgage** rates. Since 2020 **nominal** house prices have climbed by roughly 40%, while the average 30-year fixed-rate **mortgage** rose from 3.1% to 7.3%. **nominal mortgage** payments have more than doubled since 2020; rents have **risen** by only about 20%. 这要归咎于高房价和飙升的抵押贷款利率。自2020年以来，名义房价上涨了约40%，而平均30年期固定利率抵押贷款从3.1%上升到了7.3%。本课程出自公众号：熊猫外刊精读，制作不易，尊重原创，愿诸君上岸！自2020年以来，名义抵押贷款支付增加了一倍以上，租金仅上涨了20%左右。根据我们的计算，对于89%的美国人来说，现在租一套两居室的房子比买一套类似的房子便宜。而三年前，这一比例仅为16%。

But they do show how the relative costs of buying and **renting** have been upended in much of America. To restore the ownership advantage that **prevailed** in the 2010s would require **dramatic** shifts in market **conditions**: house prices would have to **tumble** by one-third, average **mortgage** rates would have to fall to 3.2% or **rental** costs rise by at least 50%. 我们的计算并未涵盖长期的潜在成本和收益，例如维护支出、还清抵押贷款后房屋的资产价值，或者投资于房产存款而不是股票市场的机会成本。但是，这些数据确实显示在美国大部分

地区，购房和租房的相对成本是如何被颠覆的。要想恢复21世纪10年代盛行的所有权优势，就需要市场条件发生巨大变化——房价必须下跌三分之一，平均抵押贷款利率必须降至3.2%，或者租金成本至少上涨50%。

【4】None of these outcomes seems likely. House prices are not expected to crash: Goldman Sachs, a bank, **forecasts** that they will **appreciate** by 1.9% in 2024 and 2.8% in 2025. Mortgages are expected to stay **pricey**, too. Goldman predicts that 30-year mortgage rates will dip, but not by much: to 7.1% by the end of 2024 and 6.6% by the end of 2025. Rents, meanwhile, seem unlikely to climb much, owing to a **glut** of newly built apartments and weak **demand**.

这些结果似乎都不太可能出现。房价预计不会崩盘：高盛银行（Goldman Sachs）预测，2024年房价将上涨1.9%，2025年将上涨2.8%。抵押贷款预计也将保持高昂。本课程出自公众号：熊猫外刊精读，制作不易，尊重原创，愿诸君上岸！高盛预测，30年期抵押贷款利率将会下降，但降幅不大——到2024年底降至7.1%，到2025年底降至6.6%。与此同时，由于新建公寓供过于求，需求疲软，租金似乎不太可能大幅上涨。

【5】Even in the few markets where homes still look **relatively** cheap—such as Baltimore, Philadelphia and the Bronx, in New York City—most homeowners are **reluctant** to sell. Nearly all have **locked** in mortgage rates that are much lower than those available to new borrowers. More than four in five existing **mortgage-holders** pay an interest rate under 5%, according to Torsten Slok of Apollo, a private-**equity** firm. So market **conditions** seem likely to put off millions of **potential** buyers and sellers of houses. For many, **renting** will increasingly look like the **affordable**
